SP9 BARCELONA

Check out our Decorative Collection Catalogue or our website for more framed mirrors.

About us...

Trendy mirrors has a wealth of experience spanning three generations of Thom family mirror manufacturers. William Thom senior pioneered mirror silvering in New Zealand back in 1938, his aim was quality, affordability and service. This is the core of Trendy Mirrors business and subsequently we only produce lasting quality at a realistic price.

We produce a range of high quality Bathroom mirrors. This is essential if the mirror is to last in typical conditions. For this reason we use Mirrox copper and lead free silver mirror. Salt tests show it has superior resistance to corrosive elements and moisture vs traditional silver mirror. Secondly the mirror is ripple free giving it a true reflection without unsightly distortion. Lastly, Mirrox mirror does not use copper or lead in the production stage, making it environmentally friendly.

Every one of our strict quality controlled New Zealand mirrors is supplied ready for installation with all necessary fixings provided.

Almost all types are designed to hang both portrait and landscape. Safety vinyl back is optional and a pre-requisite on many of our framed products.

Our designs cover every conceivable shape and type: mirror tiles, rectangular, circular, oval, triangular or arched; with polished, bevelled, sandblasted edges or framed to your choice.

Our traditional framed mirrors are made from durable solid wood and the bevel mirror will reflect true brilliance. Many more designs can be located in our Decorative Collection brochure or website.

Mirrors can be custom made to size for a perfect fit.

For those fogged-up bathroom mirrors, electric demist pads are available on almost all types, leaving a clean and mist free surface.

Choosing a Mirror to suit your bathroom or living area

Mirrors in a bathroom or living area reflect light and can add light to dark areas. Larger mirrors add a perception of space.

Size

- For darker and smaller areas use a large mirror to add light and perception of space.
- For a general size check try cutting some newspaper to size and hold against the wall.
- For size symmetry, check vanity width, window framing or shower height for alignment.
- Vertical and horizontal mirrors both give a different effect.
- For a full height mirror measure up from the basin 150mm -200mm & add sufficient height to accommodate all members of your household, normally about 900 – 1000mm is sufficient.

Double basins

For double basins use two individual heated mirrors for a contemporary finish, however if you want to increase natural lighting and the perception of space one long larger mirror is our recommendation.

Style

Choose a mirror from our extensive range to suit your personality, style and existing decor. LED Lighted mirrors, as well as looking brilliant, offer a practical solution to lighting. LED lights by nature are ecological as they draw very little power. A bevel edge will add a touch of elegance to any room, glass or timber frames add colour and depth. Frosted edge mirrors give a bathroom a sleek modern finish. Shaped mirrors add character & balance, especially suited to a pedestal vanity and a bathroom with square lines. For the Villa or for the contemporary bathroom we have a range of modern glass on glass mirrors (sectional bevel range) and traditional mirrors in our decorative brochure or website.

Choosing the fixing type for your frameless mirror

For flush wall fit > holes & domes, or glue fix

For a minimal finish > hidden fixings or glue fix. Hidden fixings have an air gap so the mirror breaths and will last longer.

For use with demist pad > hidden fixings, holes & domes, or clips (glue not recommended)

Glass and mirror splash backs

As silver is a corrosive metal the mirror should not be used as a splash back, this will void the warranty. Instead a colour glass splashback can be added for a sleek modern look and easy clean option. These can be fitted just in behind a hidden fixings mirrors which creates clean lines. Alternatively we offer a mirror with inbuilt coloured splashback.

- New generation Bathroom Mirror qualities.
- Salt, corrosion, humidity tested for most areas.
- Eco friendly copper and lead free new generation Mirror (avoids mirror clouding and increases mirror life).
- "Fenzi" twin coated mirror backing, protects the silver edges from early oxidation & blackening.
- Complete with all fixings.
- 5 year manufacture replacement guarantee.
- Mirror is Styline bathroom quality mirror.
- Contemporary design.
- Hidden fixtures attached to back of mirror.
- Complete with all fixings
- ISO 9001 2000 Certification.
- 2 year guarantee
